## Rotary Servomotors

|       |    |
|-------|----|
| SGM7J | 18 |
| SGM7A | 32 |
| SGM7G | 56 |

## Linear Servomotors

|                                      |    |
|--------------------------------------|----|
| SGLF (Models with F-Type Iron Cores) | 80 |
|--------------------------------------|----|

## SERVOPACKs

|                   |     |
|-------------------|-----|
| SGD7S Single Axis | 106 |
| SGD7W Dual Axis   | 128 |

## Option Modules

|                        |     |
|------------------------|-----|
| Option Module Safety   | 141 |
| Option Module Feedback | 145 |

## Periphery

|                        |     |
|------------------------|-----|
| Serial Converter Units | 155 |
| Periphery              | 160 |

## Appendix

|   |     |
|---|-----|
| Capacity Selection for Servomotors            | 173 |
| Capacity Selection for Regenerative Resistors | 180 |
| International Standards                       | 185 |
| Warranty                                      | 163 |

# Seven reasons for Sigma-7

The Sigma Series of Servo Drives has evolved into the Sigma-7 Servo Drives, which provides you with the ultimate experience in seven key areas and delivers the optimal solution that only YASKAWA can offer.

1

## Comprehensive motor and amplifier power range

### Wide power range

- Very compact motors from 50W to 15kW
- Linear motors iron core and ironless with a peak force up to 7,560 N

2

## Savings through performance

### Lower production costs

- Speed loop bandwidth of 3.1 kHz
- Shorter settling time, reduced positioning time, higher throughput

### No additional cooling necessary

- Ambient temperature -5 – 55 °C (max. 60 °C with derating)

### Energy savings and higher productivity

- High peak torque, fast acceleration, no amplifier oversizing
- Lightweight mechanics

### Higher performance

- Overload 350 % for 3 – 5 seconds
- High peak torque, fast acceleration

3

## Safety features

### Smooth integration of mandatory legal safety standards

- The STO function is implemented by default in all Sigma-7 series servo amplifiers
- Build safer machines - Sigma-7 satisfies the requirements of SIL 3 and PL-e
- The safety functions SS1, SS2 and SLS can be integrated by using the safety module

4

## High efficiency

### Very low heat generation

- Optimized magnetic circuit improves motor efficiency
- Improved motor efficiency reduces heat generation by about 20 %

5

## High accuracy

### Next level 24-bit absolute encoder for maximum accuracy

- Resolution of 16 million pulses per revolution for extremely precise positioning

6

## Impressive system performance

### Very high precision teamed up with fast, smooth operation

- Ripple compensation for highest demands in smoothness and dynamics
- Even for machines for which speed loop gains cannot be set high

7

## Outstanding reliability

### Even more reliability for your production

- More than 18 million servo systems in the field
- Improved machine reliability, reduced service and maintenance costs, less downtime

## Servomotors

Rotary

SGM7J

- Medium inertia, high speed
- 200 W - 1.5 kW

SGM7A

- Low inertia, high speed
- 200 W - 7.0 kW

SGM7G

- Medium inertia, high torque, low speed or high speed models
- 450 W - 15 kW

Linear

SGLFW2

- Model with F-type iron core
- Rated: 45 N - 2,520 N
- Peak: 135 N - 7,560 N

## SERVOPACKS

Single Axis

| 6                     | <b>Straight with key and tap<br/>(450 W, 1.8 kW, 2.9 kW)</b> |
| S <sup>*1</sup>       | Straight without key<br>(850 W, 1.3 kW)                      |
| K <sup>*1</sup>       | <b>Straight with key and tap<br/>(850 W, 1.3 kW)</b>         |

| 7th digit - Options |   |
|---------------------|---|
| Code                | Specification                             |
| 1                   | Without options                           |
| C                   | With holding brake (24 VDC)               |
| F                   | <b>With dust seal</b>                     |
| H                   | With dust seal and holding brake (24 VDC) |

\*1 The shaft end codes are different for 850 kW and 1.3 kW Servomotors.  
The shaft diameter for 850 W Servomotors is 19 mm.  
The shaft diameter for 1.3 kW Servomotors is 22 mm.

\*2 Available up to 4.4 kW.

Bolded options are considered standard warehouse products.

| Vibration Resistance*3   | Vibration Acceleration Rate at Flange | 49 m/s <sup>2</sup>  |     |      |      |
| Applicable SERVOPACKs    | SGD7S-                                | 1R9D   |     | 3R5D | 5R4D |

\*1. A Vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

\*2. The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

\*3. The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

\*4. If the surrounding air temperature will exceed 40°C, refer to the section "Applications where the Surrounding Air Temperature of the Servomotor Exceeds 40°C".

\*5. If the altitude will exceed 1,000 m, refer to the section "Applications where the Altitude of the Servomotor Exceeds 1000m".

Note: The values in parentheses are for Servomotors with holding brakes.

- These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.
- The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminium heat sink of the dimensions given in the table.
- This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.
- Observe the following precautions if you use a Servomotor with a holding brake.
  - The holding brake cannot be used to stop the Servomotor.
  - The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
  - The 24-VDC power supply is not provided by YASKAWA.
- The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

## Motor Speed-Torque Characteristics

**A**: Continuous duty zone

**B**: Intermittent duty zone

Notes:

- These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
- The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zones in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics above.

## Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable. The allowable size of the load moment of inertia ( $J_L$ ) for the Servomotor is restricted. Refer to Ratings of Rotary Servomotors SGM7J. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an external regenerative resistor if the alarm cannot be cleared using the above steps.

## Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following

graphs for the relation between the heat sink size and derating rate.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the Servomotor Overload Protection Characteristics.

**Note:**

The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

**Important:**

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

See Servomotor Ratings for more information.

## Applications Where the Surrounding Air Temperature of the Servomotor Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the Servomotor Overload Protection Characteristics.

Note:

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

## Applications Where the Altitude of the Servomotor Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the Servomotor Overload Protection Characteristics.

Note:

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

\*1 A Vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

\*2 The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

\*3 The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

\*4 Refer to the section "Applications where the Surrounding Air Temperature of the Servomotor Exceeds 40°C".

\*5 If the altitude will exceed 1,000 m, refer to the section "Applications where the Altitude of the Servomotor Exceeds 1000m".

\*6 If you use this combination, performance may not be as good, e.g., the control gain may not increase, in comparison with using a Sigma-7 Single Axis SERVOPACK.

## Servomotor Ratings

Note: The values in parentheses are for Servomotors with Holding Brakes.

\*1. For the SGM7A-02D to SGM7A-10D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. For the SGM7A-15D to SGM7A-30D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

\*3. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*4. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

\*5. The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

\*6. For the SGM7A-25D, the maximum motor speed for the continuous duty zone is 5,000 min<sup>-1</sup>. Use the Servomotor within the continuous duty zone for the average motor speed and effective torque.

## Motor Speed-Torque Characteristics

**Note:**

- For the SGM7A-02D to SGM7A-10D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. For the SGM7A-15D to SGM7A-30D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
- The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zones in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Note:  
The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics.

## Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

The allowable size of the load moment of inertia ( $J_L$ ) for the Servomotor is restricted. Refer to Ratings of Rotary Servomotors SGM7J. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an external regenerative resistor if the alarm cannot be cleared using the above steps.

## Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

**Note:**  
The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

**Important:**

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

See Servomotor Ratings for more information.

## Applications Where the Surrounding Air Temperature of the Servomotor Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

**Note:**

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

## Applications Where the Altitude of the Servomotor Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

**Note:**

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

| C                   | With holding brake (24 VDC)                  |
| <b>F</b>            | <b>With dust seal</b>                        |
| H                   | With dust seal and holding<br>brake (24 VDC) |

\*1 The shaft end codes are different for 850 kW and 1.3 kW Servomotors.  
The shaft diameter for 850 W Servomotors is 19 mm.  
The shaft diameter for 1.3 kW Servomotors is 22 mm.

\*2 Available up to 4.4 kW.

Bolded options are considered standard warehouse products.

|                          | SGD7W-<br>2R6D or<br>5R4D*6           | 3R5D<br>5R4D   | 5R4D                             | 8R4D                             | 120D                 | 170D         | 210D         | -            |                       |              |              |              |              |

\*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

\*2. The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

\*3. The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

\*4. If the surrounding air temperature will exceed 40°C, refer to the section "Applications where the Surrounding Air Temperature of the Servomotor Exceeds 40°C".

\*5. If the altitude will exceed 1,000 m, refer to the section "Applications where the Altitude of the Servomotor Exceeds 1000m".

\*6. If you use this combination, performance may not be as good, e.g., the control gain may not increase, in comparison with using a Sigma-7S SERVOPACK.

## Servomotor Ratings

### Standard Servomotors

| Voltage  |  | 400 V                               |                        |                  |                  |                  |                        |                  |                  |                           |                  |      |  |

| Allowable Shaft Load *5  | LF   | mm                                  | 40                     | 58               |                  |                  | 79                     |                  | 113              |                           | 116              |      |  |
|  | Allowable Radial Load  | N                                   | 490                    |                  | 686              | 980              | 1,470                  |                  | 1,764            |                           | 4,998            |      |  |
|  | Allowable Thrust Load  | N                                   | 98                     | 343              |                  | 392              | 490                    |                  | 588              |                           | 2,156            |      |  |

Note:  
The values in parentheses are for Servomotors with Holding Brakes.

- \*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
- \*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum or steel heat sink of the dimensions given in the table.
- \*3. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.
- \*4. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

\*5. The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

## High-speed Servomotors

|  | Allowable Thrust Load  | 98                                  |                  | 343                    |                  | 490              |                  |  |

Note:  
The values in parentheses are for Servomotors with Holding Brakes.

- \*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
- \*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminium or steel heat sink of the dimensions given in the table.
- \*3. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.
- \*4. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

\*5. The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

## Motor Speed-Torque Characteristics

### Standard Servomotors

**A** : Continuous duty zone

**B** : Intermittent duty zone

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zone in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## High-speed Servomotors

**A** : Continuous duty zone

**B** : Intermittent duty zone

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zone in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

### Standard Servomotors

SGM7G-05

SGM7G-09, -13, and -20

SGM7G-30, -44, -55, and -75

SGM7G-1A and -1E

**Note:**

The overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics.

## High-speed Servomotors

SGM7G-05

SGM7G-09, -13, and -20

SGM7G-30 and -44

**Note:**

The overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics.

## Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

The allowable size of the load moment of inertia (JL) for the Servomotor is restricted. Refer to Ratings of Rotary Servomotors SGM7J. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320).

Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an external regenerative resistor if the alarm cannot be cleared using the above steps.

## Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:

The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

### Important:

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

See Servomotor Ratings for more information.

## Applications Where the Surrounding Air Temperature of the Servomotor Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

## Applications Where the Altitude of the Servomotor Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

| Code                                       | Specification |
| 270  | 270 mm        |
| 306  | 306 mm        |
| 450  | 450 mm        |
| 510  | 510 mm        |
| 630  | 630 mm        |
| 714  | 714 mm        |

| 8th digit - Design Revision Order |                |
|-----------------------------------|----------------|
| Code                              | Specification  |
| A                                 | Standard Model |

Note: This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

## Precautions on Moving Coils with Polarity Sensors

Note:  
 When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor.  
 Refer to the example that shows the correct installation.  
 When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

### Correct Installation

### Incorrect Installation

### Total Length of Moving Coil with Polarity Sensor

| Moving Coil Model SGLFW2- | Length of Moving Coil, L1 (mm) | Length of Polarity Sensor, A (mm) | Total Length, L (mm) |
|---------------------------|--------------------------------|-----------------------------------|----------------------|
| 30D070AS                  | 70                             |                                   | 97                   |
| 30D120AS                  | 125                            | 27                                | 152                  |

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

\*2. The rated forces are the continuous allowable force values at a ambient temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

Heat Sink Dimensions:

- 150 mm × 100 mm × 10 mm: SGLFW2-30D070A
- 254 mm × 254 mm × 25 mm: SGLFW2-30D120A and -30D230A
- 400 mm × 500 mm × 40 mm: SGLFW2-45D200A and -45D380A

## Force-Motor Speed Characteristics

**A** : Continuous duty zone ——— With three-phase 400-V input

**B** : Intermittent duty zone - - - - - With three-phase 400-V input

Notes:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Heat Sink Dimensions:

- 400 mm × 500 mm × 25 mm: SGLFW2-90D200A
- 609 mm × 762 mm × 40 mm: SGLFW2-90D380A
- 900 mm × 762 mm × 40 mm: SGLFW2-90D560A and -1DD380A
- 1400 mm × 900 mm × 40 mm: SGLFW2-1DD560A

\*3. Contact your YASKAWA representative for information on these servopack models.

## Force-Motor Speed Characteristics

**A** : Continuous duty zone      ——— With three-phase 400-V input

**B** : Intermittent duty zone      - - - - - With three-phase 400-V input

Notes:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Notes:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics.

## System Configurations

\* You can connect directly to an absolute linear encoder.

Notes:

1. The above system configurations are for SGLFW2 Servomotors with F-Type Iron Cores (with thermal protectors). Refer to the manual for the Linear Servomotor for configurations with other models.
2. Refer to the following manual for the following information.
  - Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
  - Order numbers and specifications for wiring materials

Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual.

\* This is the net value at the rated load.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C\*.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics. In most cases, that will be the overload protection characteristics of the Servomotor.

**Note:**

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

\* However, the range for the SGD7S-370D is -5°C to 40°C.

| Protective Functions  |                                     | Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal  |
| Utility Functions   |                                     | Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.   |
| Utility Functions   |                                     | Gain adjustment, alarm history, jogging, origin search, etc.  |
| Safety Functions  | Inputs                              | /HWBB1 and /HWBB2: Base block signals for Power Modules   |
|   | Output                              | EDM1: Monitors the status of built-in safety circuit (fixed output).  |
|   | Applicable Standards*3              | ISO13849-1 PLe (Category 3), IEC61508 SIL3  |
| Applicable Option Modules   |                                     | Fully-closed Modules, Option Module Safety  |

\*1. If you combine a Sigma-7 SERVOPACK with a Sigma-V Option Module, the surrounding air temperature specification of the Sigma-V SERVOPACKs must be used, i.e., 0°C to 55°C. Also, the applicable surrounding range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*3. The SGD7S-210D, -260D, -280D, and -370D do not have a dynamic brake (DB). If a dynamic brake is necessary, create an external dynamic brake circuit.

\*4. Always perform risk assessment for the system and confirm that the safety requirements are met.

## Specifications using Sigma-7Siec Communication Reference

| Item                     |   | Specification   |   |
|--------------------------|---|---|---|
| Control Method           |   | IGBT-based PWM control, sine wave current drive   |   |
| Feedback                 | With Rotary Servomotor  | Serial encoder: 24 bits (incremental encoder/absolute encoder)<br><ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul> |   |
|                          | With Linear Servomotor  |   |   |
| Environmental Conditions | Surrounding Air Temperature*1   | -5°C to 55°C (60°C with derating)<br>However, the range for the SGD7S-370D is -5°C to 40°C.   |   |
|                          | Storage Temperature   | -20°C to 85°C   |   |
|                          | Surrounding Air Humidity  | 95% relative humidity max. (with no freezing or condensation)   |   |
|                          | Storage Humidity  | 95% relative humidity max. (with no freezing or condensation)   |   |
|                          | Vibration Resistance  | 4.9 m/s <sup>2</sup>  |   |
|                          | Shock Resistance  | 19.6 m/s <sup>2</sup>   |   |
|                          | Degree of Protection  | IP10  |   |
|                          | Pollution Degree  | 2<br><ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>  |   |

# SERVOPACKs SGD7S

Continued from previous page.

| Item   |                              | Specification   |
|--|------------------------------|---|
| MECHATROLINK-III Communications                  | Communications Protocol      | MECHATROLINK-III  |
|  | Station Address Settings     | 03 to EF hex (maximum number of slaves: 62)<br>The rotary switches (S1 and S2) are used to set the station address.   |
|  | Transmission Speed           | 100Mbps   |
|  | Transmission Cycle           | 125 μs, 250 μs, 500 μs, 750 μs, 1.0 ms to 4.0 ms (multiples of 0.5 ms)  |
| Reference Method                                 | Number of Transmission Bytes | 32 or 48 bytes/station<br>A DIP switch (S3) is used to select the number of transmission bytes.   |
|  | Performance                  | Position, speed, or torque control with MECHATROLINK-III communications   |
|  | Reference Input              | MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)   |
| MECHATROLINK-III Communications Setting Switches |                              | Profile<br>MECHATROLINK-III standard servo profile  |
| MECHATROLINK-III Communications Setting Switches |                              | Rotary switch (S1 and S2) positions: 16<br>Number of DIP switch (S3) pins: 4<br>Number of points: 2   |
| Analog Monitor (CN5)                             |                              | Output voltage range: ±10 VDC (effective linearity range: ±8 V)<br>Resolution: 16 bits<br>Accuracy: ±20 mV (Typ)<br>Maximum output current: ±10 mA<br>Settling time (±1%): 1.2 ms (Typ) |
| Dynamic Brake (DB)                               |                              | Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.   |
| Regenerative Processing                          |                              | Built-in<br>Refer to the catalog for details.   |
| Overtravel (OT) Prevention                       |                              | Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal                                |
| Protective Functions                             |                              | Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.   |
| Utility Functions                                |                              | Gain adjustment, alarm history, jogging, origin search, etc.  |
| Safety Functions                                 | Inputs                       | /HWBB1 and /HWBB2: Base block signals for Power Modules   |
|  | Output                       | EDM1: Monitors the status of built-in safety circuit (fixed output).  |
|  | Applicable Standards*3       | ISO13849-1 PLe (Category 3), IEC61508 SIL3  |
| Applicable Option Modules                        |                              | Fully-closed Modules  |

\*1. If you combine a Sigma-7 SERVOPACK with a Sigma-V Option Module, the surrounding air temperature specification of the Sigma-V SERVOPACKs must be used, i.e., 0°C to 55°C. Also, the applicable surrounding range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*3. The SGD7S-210D, -260D, -280D, and -370D do not have a dynamic brake (DB). If a dynamic brake is necessary, create an external dynamic brake circuit.

\*4. Always perform risk assessment for the system and confirm that the safety requirements are met.

## Specifications using PROFINET Communication Reference

| Item  |   | Specification   |  |
|---|---|---|--|
| Control Method  |   | IGBT-based PWM control, sine wave current drive   |  |
| Feedback  | With Rotary Servomotor  | Serial encoder: 24 bits (incremental encoder/absolute encoder)  |  |
|   | With Linear Servomotor  | <ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul> |  |
| Environmental Conditions  | Surrounding Air Temperature*1   | -5°C to 55°C (60°C with derating)<br>However, the range for the SGD7S-370D is -5°C to 40°C.   |  |
|   | Storage Temperature   | -20°C to 85°C   |  |
|   | Surrounding Air Humidity  | 95% relative humidity max. (with no freezing or condensation)   |  |
|   | Storage Humidity  | 95% relative humidity max. (with no freezing or condensation)   |  |
|   | Vibration Resistance  | 4.9 m/s <sup>2</sup>  |  |
|   | Shock Resistance  | 19.6 m/s <sup>2</sup>   |  |
|   | Degree of Protection  | IP10  |  |
|   | Pollution Degree  | 2 <ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>   |  |
| Altitude  | 1,000 m or less (above 1,000 m with derating)   |   |  |
| Others  | Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity<br>Refer to the section Compliance with UL Standards, EU Directives, and Other Safety Standards (in Combination with SERVOPACK). |   |  |
| Applicable Standards  |   |   |  |
| Mounting  |   | Base-mounted  |  |
| Performance   | Speed Control Range   | 1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)  |  |
|   | Coefficient of Speed Fluctuation*2  | ±0.01 % of rated speed max. (for a load fluctuation of 0 % to 100 %)  |  |
|   |   | 0% of rated speed max. (for a voltage fluctuation of ±10 %)   |  |
|   | Torque Control Precision (Repeatability)  | ±1 %  |  |
| Soft Start Time Setting   |   | 0s to 10s (Can be set separately for acceleration and deceleration.)  |  |
| I/O Signals   | Encoder Divided Pulse Output  |   | Phase A, phase B, phase C: Line-driver output<br>Number of divided output pulses: Any setting is allowed   |
|   | Linear Servomotor Overheat Protection Signal Input  |   | Number of input points: 1<br>Input voltage range: 0 V to +5 V  |
|   | Sequence Input Signals  | Input Signals that can be allocated   | Allowable voltage range: 24 VDC ±20 %<br>Number of input points: 7<br>Input method: Sink inputs or source inputs<br>Input Signals <ul style="list-style-type: none"> <li>P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals</li> <li>/EXT1 (Probe 1 Latch Input) signal</li> <li>/EXT2 (Probe 2 Latch Input) signal</li> <li>/DEC (Home Switch Input) signal</li> <li>/P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals</li> <li>/SI0 and /SI6 (General-Purpose Input) signals</li> </ul>     |
|   |   |   | A signal can be allocated and the positive and negative logic can be changed.  |
|   | Sequence Output Signals   | Output Signals that can be allocated  | Allowable voltage range: 5 VDC to 30 VDC<br>Number of output points: 1<br>Output signal: ALM (Servo Alarm) signal  |
|   |   |   | Allowable voltage range: 5 VDC to 30 VDC<br>Number of output points: 5<br>(A photocoupler output (isolated) is used.)<br>Output Signals <ul style="list-style-type: none"> <li>/COIN (Positioning Completion) signal</li> <li>/V-CMP (Speed Coincidence Detection) signal</li> <li>/TGON (Rotation Detection) signal</li> <li>/S-RDY (Servo Ready) signal</li> <li>/CLT (Torque Limit Detection) signal</li> <li>/VLT (Speed Limit Detection) signal</li> <li>/BK (Brake) signal</li> <li>/WARN (Warning) signal</li> <li>/NEAR (Near) signal</li> </ul> |
| A signal can be allocated and the positive and negative logic can be changed. |   |   |  |
| Communications  | RS-422A Communications (CN502)  | Interfaces  | Digital Operator (JUSP-OP05A-1-E)  |
|   |   | 1:N Communications  | Up to N = 15 stations possible for RS-422A port  |
|   | Axis Address Setting  | Set with parameters.  |  |
| USB Communications (CN7)  | Interface Communications Standard   | Interface   | Personal Computer (with SigmaWin+)   |
|   |   | Communications Standard   | The software version of the SigmaWin+ must be version 7.28 or higher.<br>Conforms to USB 2.0 standard (12 Mbps).   |

| Dynamic Brake (DB)         | Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.   |   |
| Regenerative Processing    | Built-in. Refer to the catalog for details.   |   |
| Overtravel (OT) Prevention | Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal  |   |
| Protective Functions       | Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.   |   |
| Utility Functions          | Gain adjustment, alarm history, jogging, origin search, etc.  |   |
| Safety Functions           | Inputs  | /HWBB1 and /HWBB2: Base block signals for Power Modules   |
|                            | Output  | EDM1: Monitors the status of built-in safety circuit (fixed output).  |
|                            | Applicable Standards*3  | ISO13849-1 PLe (Category 3), IEC61508 SIL3  |
| Applicable Option Modules  | Fully-closed Modules, Option Module Safety  |   |

\*1. If you combine a Sigma-7 SERVOPACK with a Sigma-V Option Module, the surrounding air temperature specification of the Sigma-V SERVOPACKs must be used, i.e., 0°C to 55°C. Also, the applicable surrounding range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*3. The SGD7S-210D, -260D, -280D, and -370D do not have a dynamic brake (DB). If a dynamic brake is necessary, create an external dynamic brake circuit.

\*4. Always perform risk assessment for the system and confirm that the safety requirements are met.

# Front Cover Dimensions and Connector Specifications

The front cover dimensions and panel connectors depend on the SERVOPACK interface. Refer to the following figures.

## Front Cover Dimensions and Connector Specifications

The front cover dimensions and panel connector section are the same for all models. Refer to the following figures and table.

### • Front Cover Dimensions and Connectors

\* Dynamic Brake Connector only for SGD7S-1R9D up to -170D.

### • Connector Specifications

| Connector No. | Function                                       | Model  | YASKAWA Order Code  | Number of Pins | Manufacturer                  |
|---------------|--|--|---|----------------|-------------------------------|

## Dimensions of base-mounted SERVOPACKs

- Three-Phase, 400 VAC: SGD7S-1R9D, -3R5D, -5R4D, -8R4D, and -120D

Approx. mass: SGD7S-1R9D, -3R5D, or -5R4D: 3.4 kg  
 SGD7S-8R4D or -120D: 3.7 kg  
 Unit: mm

- Three-Phase, 400 VAC: SGD7S-170D

Approx. mass: 5.5 kg  
 Unit: mm

• Three-Phase, 400 VAC: SGD7S-210D and -260D

Approx. mass: 7.0 kg  
Unit: mm

• Three-Phase, 400 VAC: SGD7S-280D and -370D

Approx. mass: 13.5 kg  
Unit: mm

## System Configurations up to 5 kW

### SGD7S Single-axis EtherCAT Reference SERVOPACKs

\*1. represents twisted-pair wires.

\*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.

\*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.

\*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.

\*5. Always use line receivers to receive the output signals.

\*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.

\*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB02F64 and SGD7W-oooDooB026.

\*8. If using these terminals, contact your YASKAWA representative.

\*9. The CN115 Dynamic Brake Connector is only for SGD7S-1R9D up to -170D.

# System Configurations with 6 kW and more

## SGD7S Single-axis EtherCAT Reference SERVOPACKs

\*1. represents twisted-pair wires.

\*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.

\*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.

\*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.

\*5. Always use line receivers to receive the output signals.

\*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.

\*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB026F64 and SGD7W-oooDooB026.

\*8. If using these terminals, contact your YASKAWA representative.

With the SGD7S-210D, -260D, -280D, or -370D, connect a Regenerative Resistor Unit between B1 and B2.

## System Configurations up to 5 kW

### SGD7S Single-axis PROFINET Reference SERVOPACKs

\*1. represents twisted-pair wires.

\*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.

\*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.

\*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.

\*5. Always use line receivers to receive the output signals.

\*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.

\*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB02F64 and SGD7W-oooDooB026.

\*8. If using these terminals, contact your YASKAWA representative.

\*9. The CN115 Dynamic Brake Connector is only for SGD7S-1R9D up to -170D.

## Cables for SERVOPACKs

**Important**

1. Use the cable specified by YASKAWA for the computer cable.  
Operation may not be dependable with any other cable.

Notes:

Refer to the manual for the following information. Cable dimensional drawings and cable connection specifications.  
Order numbers and specifications of individual connectors for cables. Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual.

| Name   |                                     | Length (L)        | Order Number                 | Appearance  |

|  | 50 m                                | JZSP-CM3R□01-50-E |                              |   |

- \*1. When using the safety function, connect this cable to the safety devices.  
Even when not using the safety function, use SERVOPACKs with the Safe Jumper Connector (model: JZSP-CVH05-E) connected.
- \*2. Use the connector kit when you make cables yourself.
- \*3. This cable is available in two variants. The order number for these cables differs at the marked □, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End. „M“ Variant not available for PROFINET cables.

## Motor Connection Shielding Clamp

Shielding clamp mountable on Sigma-7 400V SERVOPACKs up to 15 kW.  
Contact your YASKAWA representative for more information.

| SERVOPACK Model                   | Order No.       | Specification   |

\* This is the net value at the rated load.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics. In most cases, that will be the overload protection characteristics of the Servomotor.

Note:  
The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

## Specifications using EtherCAT Communication Reference

| Item   |   | Specification   |  |
|--|---|---|--|
| Control Method   |   | IGBT-based PWM control, sine wave current drive   |  |
| Feedback   | With Rotary Servomotor  | Serial encoder: 24 bits (incremental encoder/absolute encoder)  |  |
|  | With Linear Servomotor  | <ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul> |  |
| Environmental Conditions   | Surrounding Air Temperature   | -5°C to 55°C (60°C with derating)   |  |
|  | Storage Temperature   | -20°C to 85°C   |  |
|  | Surrounding Air Humidity  | 95 % relative humidity max. (with no freezing or condensation)  |  |
|  | Storage Humidity  | 95 % relative humidity max. (with no freezing or condensation)  |  |
|  | Vibration Resistance  | 4.9 m/s <sup>2</sup>  |  |
|  | Shock Resistance  | 19.6 m/s <sup>2</sup>   |  |
|  | Degree of Protection  | IP10  |  |
|  | Pollution Degree  | 2 <ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>   |  |
| Altitude   | 1,000 m or less (above 1,000 m with derating)   |   |  |
| Others   | Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity<br>Refer to the section Compliance with UL Standards, EU Directives, and Other Safety Standards (in Combination with SERVOPACK). |   |  |
| Applicable Standards   |   |   |  |
| Mounting   |   | Base-mounted  |  |
| Performance  | Speed Control Range   | 1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)  |  |
|  | Coefficient of Speed Fluctuation*1  | ±0.01 % of rated speed max. (for a load fluctuation of 0 % to 100 %)  |  |
|  |   | 0 % of rated speed max. (for a voltage fluctuation of ± 10 %)   |  |
|  | Torque Control Precision (Repeatability)  | ±0.1 % of rated speed max. (for a temperature fluctuation of 25 °C ± 25 °C)   |  |
| Soft Start Time Setting  | ±1 %  |   |  |
| I/O Signals  | Linear Servomotor Overheat Protection Signal Input  |   | Number of input points: 1<br>Input voltage range: 0 V to +5 V<br>Allowable voltage range: 24 VDC ± 20 %  |

Note: The above connectors or their equivalents are used for the SERVOPACKs.

## Base-mounted SERVOPACKs

Mounting Hole Diagram

Approx. mass: 2R6D: 4.1 kg  
5R4D: 4.3 kg

Unit: mm

# System Configurations up to 2×1.5 kW

## SGD7W Dual-axis EtherCAT Reference SERVOPACKs

\*1. represents twisted-pair wires.

\*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.

\*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.

\*4. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24 VDC to the control power supply input terminals.

\*5. The CN117 connector is used for SERVOPACKs with built-in Servomotor brake control. SERVOPACKs without built-in Servomotor brake control do not have the CN117 connector.

Note: 1. You can use parameter settings to change some of the I/O signal allocations.

2. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

3. Default settings are given in parentheses.

## System Configurations up to 2×1.5 kW

### SGD7W Dual-axis MECHATROLINK-III Reference SERVOPACKs

\*1. represents twisted-pair wires.

\*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.

\*5. The CN117 connector is used for SERVOPACKs with built-in Servomotor brake control. SERVOPACKs without built-in Servomotor brake control do not have the CN117 connector.

Note: 1. You can use parameter settings to change some of the I/O signal allocations.

2. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

3. Default settings are given in parentheses.

## Cables for SERVOPACKs

**Important**

1. Use the cable specified by YASKAWA for the computer cable.  
Operation may not be dependable with any other cable.

**Notes:**

Refer to the manual for the following information. Cable dimensional drawings and cable connection specifications.  
Order numbers and specifications of individual connectors for cables. Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual.

| Name   |                                     | Length (L)  | Order Number                 | Appearance |

- \*1. When using the safety function, connect this cable to the safety devices.  
Even when not using the safety function, use SERVOPACKs with the Safe Jumper Connector (model: JZSP-CVH05-E) connected.
- \*2. Use the connector kit when you make cables yourself.
- \*3. This cable is available in two variants. The order number for these cables differs at the marked □, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End.

## Motor Connection Shielding Clamp

Shielding clamp mountable on Sigma-7 400V SERVOPACKs up to 15 kW.  
Contact your YASKAWA representative for more information.

| SERVOPACK Model                   | Order No.       | Specification |
|-----------------------------------|-----------------|---------------|
| Sigma-7 400V up to 3.0kW          | KLBUE 4-13.5_SC |               |
| Sigma-7 400V from 5kW up to 7.5kW | KLBUE 10-20_SC  |               |
| Sigma-7 400V for 11kW & 15kW      | KLBUE 15-32_SC  |               |

## Option Modules

|                        |     |
|------------------------|-----|
| Option Module Safety   | 141 |
| Option Module Feedback | 145 |

## Option Module Safety

This Safety Module implements safety functions that conform to EN ISO 13849-1 (the harmonized EU Machinery Directive) and are specified in the individual IEC 61800-5-2 standard. You can combine it with a Sigma-7 400V SERVOPACK to design optimum safety in a machine system according to industry needs.

**SERVOPACKs, Option Module Safety and Mounting Rail need to be ordered separately. Please use the following model designations.**

### Option Module Safety

SGDV - OS A01 A 000 FT900

## Support for Functions Defined in IEC61800-5-2

Safety functions are implemented by using the hard wire base block (HWBB) in the SERVOPACK.

| Safety Function   | Description   | Applicable Products       |                          |                                 |              |
|---|---|---------------------------|--------------------------|---------------------------------|--------------|
|   |   | SGD7S<br>SGD7W Axis A + B | SGD7S +<br>Safety Module | SGD7W Axis A +<br>Safety Module | SGD7W Axis B |
| Safe BaseBlock Function*<br>(SBB function)                    | This safety function is equivalent to an STO function. (It shuts OFF the power supply from the SERVOPACK to the motor.)   | √                         | √                        | √                               | √            |
| Safe BaseBlock with Delay Function<br>(SBB-D function)        | This safety function is equivalent to an SS1 function. (It monitors the deceleration operation of the motor for the specified time and then shuts OFF the power supply from the SERVOPACK to the motor.)                        | —                         | √                        | √                               | —            |
| Safe Position Monitor with Delay Function<br>(SPM-D function) | This safety function is equivalent to an SS2 function. (It monitors the deceleration operation of the motor for the specified time and then monitors the position after the motor stops.)                                       | —                         | √                        | √                               | —            |
| Safely Limit Speed with Delay Function<br>(SLS-D function)    | This safety function is equivalent to an SLS function. (It monitors the deceleration operation of the motor for the specified time and then monitors the speed of the motor to confirm that it remains in the allowable range.) | —                         | √                        | √                               | —            |

\* In combination with a Option Module Safety, the selection of Safe BaseBlock Function (Safe Torque Off) is possible on SERVOPACK CN8 or Option Module Safety.

| SERVOPACK |          | Safety Module      | Safe Performance:<br>SERVOPACK CN8□ | Safe Performance:<br>Safety Module |
|-----------|----------|--------------------|-------------------------------------|------------------------------------|
| SGD7S     |          | SGDV-OS01A         | CN8: Not apply (*2)                 | Apply                              |
|           |          | SGDV-OS01A000FT900 | CN8: Apply                          | Apply                              |
| SGD7W     | Axis A*1 | SGDV-OS01A         | Apply                               | Apply                              |
|           | Axis B*1 | -                  | CN8B: Apply                         | -                                  |
| SGD7W     | Axis A   | SGDV-OS01A000FT900 | CN8A: Apply                         | Apply                              |
|           | Axis B   | -                  | CN8B: Apply                         | -                                  |

\*1 When the Safety Module is attached to the SGD7W, the Safety Module operates for Axis A only.

\*2 A safety jumper connector should be connected for not applied CN8□.

# Specifications and Ratings

| Proof Test Interval        |   | 10 years   |  |   |

\* If Safe Torque Off is used on the SERVOPACK side CN8, the specification of Safe Performance changes to PLe, for specifics refer to the SERVOPACK Specifications in this catalogue.

## Top View of SERVOPACK with safety module installed

| Device Label | Model     | Number of Pins | Manufacturer                |
|--------------|-----------|----------------|-----------------------------|
| CN21         | 1981080-1 | 8              | Tyco Electronics Japan G.K. |
| CN22         | 1981080-1 | 8              | Tyco Electronics Japan G.K. |
| CN8          | 1981080-1 | 8              | Tyco Electronics Japan G.K. |

**Notes:**

1. The above connectors or their equivalents are used for SERVOPACKs.
2. Refer to the user's manual of the Safety Module for installation standards.

## Cables for Option Module Safety

| Name                    | Length | Order No.          | Specification |
|-------------------------|--------|--------------------|---------------|
| Cables with connectors* | 1 m    | JZSP-CVH03-01-E-G# |               |
|                         | 3 m    | JZSP-CVH03-03-E-G# |               |

\* When using safety functions, connect this Cable to the safety functions devices.  
 When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

## Specifications for JZSP-CVH03-03-E-G#

| Pin No. | Signal   | Lead Color | Marking Color |
|---------|----------|------------|---------------|
| 1       | Not used | –          | –             |
| 2       | Not used | –          | –             |
| 3       | /HWBB1–  | White      | Black         |
| 4       | /HWBB1+  | White      | Red           |
| 5       | /HWBB2–  | Gray       | Black         |
| 6       | /HWBB2+  | Gray       | Red           |
| 7       | EDM1–    | Orange     | Black         |
| 8       | EDM1+    | Orange     | Red           |

# Option Module Feedback

## Fully-Closed Module

With fully-closed control, an externally installed encoder is used to detect the position of the controlled machine and the machine's position information is fed back to the SERVOPACK. High-precision positioning is possible because the actual machine position is fed back directly. To perform fully-closed loop control, a Fully-Closed Module and SERVOPACK are required.

**SERVOPACKs, Option Module Feedback and Mounting Rail need to be ordered separately. Please use the following model designations.**

## Model Designation

SGDV - OF A01 A

Option Module Safety      1st & 2nd      3rd ... 5th      6th      digit

| 1st & 2nd digit - Module Type |                        |
|-------------------------------|------------------------|
| Code                          | Module                 |
| OF                            | Option Module Feedback |

| 3rd ... 5th digit - Interface Specifications |                             |
|--|-----------------------------|
| Code   | Interface                   |
| A01  | for YASKAWA Serial Protocol |
| B01  | Serial and Sin/Cos Encoders |
| B03  | Pulse A quad B Encoders     |
| B04  | Resolver                    |

| 6th digit - Design Revision Order |                |
|-----------------------------------|----------------|

| A                                 | Initial Design |

## Mounting Rail for Option Cards

Mounting Rail for Option Cards for Sigma-7 400V SERVOPACKs.  
Contact your YASKAWA representative for more information.

| SERVOPACK Model | Order No.     | Specification  |
|-----------------|---------------|--|
| All Models      | JZSP-P7R2-8-E |  |

## System Configuration with SGDV-OFA01A

\* The connected devices and cables depend on the type of external Linear Encoder that is used.  
Note: Refer to the following section for the information on peripheral devices or chapter Peripheral Devices.

## Connections to Linear Encoder from Heidenhain Corporation

### Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a YASKAWA Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) in the Serial Converter Unit.

\*1. When using a JZDP-J00□□□□ Serial Converter Unit, do not use a YASKAWA Linear Encoder Cable that is longer than 3 m.

\*2. Contact Heidenhain Corporation for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Heidenhain Corporation.

| No. | Item                                  | Model                                |
|-----|---------------------------------------|--------------------------------------|
| ①   | Fully-Closed Module (Purchased alone) | Fully-Closed Module*1<br>SGDV-OFA01A |
| ②   | Serial Converter Unit Cable           | JZSP-CLP70-□□ <sup>3</sup> -E        |
| ③   | Serial Converter Unit <sup>2</sup>    | JZDP-H003-000                        |
| ④   | Linear Encoder Cable                  | JZSP-CLL30-□□ <sup>3</sup> -E        |

\*1 When ordering a SERVOPACK and a Fully-Closed Module separately, use this Fully-Closed Module model number. Please use the YASKAWA mounting rail JZSP-P7R2-8-E in combination with a Fully-Closed Module.

\*2 Contact your YASKAWA representative for specific information.

\*3 The boxes (□□) in the model number are replaced with cable length when ordering. (1m = 01, 3m = 03, 5m = 05, 10m = 10, 15m = 15)

## Connections when using a YASKAWA Serial Interface for the Output Signals

### LIC4100 Linear Encoder with EIB3391Y Interpolator

\* Use an Encoder Cable from Heidenhain Corporation. Contact Heidenhain Corporation for detailed Encoder Cable specifications.

## Connections to Linear Encoder from Renishaw Plc

### Connections for a 1 Vp-p Analog Voltage Output Signal

\*1 When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a YASKAWA Linear Encoder Cable that is longer than 3 m.

\*2 Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc.

\*3 If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

| No. | Item                                  | Model                                |
|-----|---------------------------------------|--------------------------------------|
| ①   | Fully-Closed Module (Purchased alone) | Fully-Closed Module*1<br>SGDV-OFA01A |
| ②   | Serial Converter Unit Cable           | JZSP-CLP70-□□ <sup>③</sup> -E        |
| ③   | Serial Converter Unit <sup>②</sup>    | JZDP-H005-000                        |
| ④   | Linear Encoder Cable                  | JZSP-CLL00-□□ <sup>③</sup> -E        |

\*1 When ordering a SERVOPACK and a Fully-Closed Module separately, use this Fully-Closed Module model number. Please use the YASKAWA mounting rail JZSP-P7R2-8-E in combination with a Fully-Closed Module.

\*2 Contact your YASKAWA representative for specific information.

\*3 The boxes (□□) in the model number are replaced with cable length when ordering. (1m = 01, 3m = 03, 5m = 05, 10m = 10, 15m = 15)

## Connections to Linear Encoder from Magnescale Co., Ltd.

### SL7□0 Linear Encoder and PL101-RY Sensor Head with Interpolator

\* Refer to the following section for information on cables to connect Fully-Closed Modules and Linear Encoders or chapter Serial Converter Unit Cables.

## SR-75, SR-77, SR-85, and SR-87 Linear Encoders

\* To connect the SERVOPACK and Linear Encoder, use a CH33-xx□□G Cable from Magnescale Co., Ltd. (This Cable has connectors designed for use with YASKAWA products).

## RU77-4096ADF/RU77-4096AFFT01 Absolute Rotary Encoders

\* To connect the SERVOPACK and Rotary Encoder, use a CE28-Series Extension Cable for RU77 from Magnescale Co., Ltd.

Note: The RU77 is a single-turn absolute rotary encoder.

## Connections to Linear Encoders from Mitutoyo Corporation

### ST78□A Linear Encoders

\* Refer to the following section for information on cables to connect Fully-Closed Modules and Linear Encoders or chapter Serial Converter Unit Cables.

## Connectors

| Device Label | Model        | YASKAWA Order No. | Number of Pins | Manufacturer  |
|--------------|--------------|-------------------|----------------|---------------|
| CN31         | 3E106-0220KV | JZSP-CMP9-1-E-G#  | 6              | 3M Japan Ltd. |

Note: The above connector or their equivalent are used for the Fully-Closed Module.

## System Configuration with SGDV-OFB0□A

## Option Module Feedback Set-up for Fully-closed Loop Control

The encoder parameters must be written into the module via the SERVOPACK using the SigmaWin+ engineering tool. Ask YASKAWA for preparation encoder parameter file for fully-closed loop.

### Procedure to download the encoder parameter via SigmaWin+ Version 7.2x via Sigma-7 400V to Option Module Feedback.

1. Install a motor, encoder and SERVOPACK.
2. In SigmaWin+ select "Parameters > Parameter edit". Set parameter Pn002.3 = 1 or 3.
3. Start "Setup > Motor parameter scale write" in SigmaWin+.
4. Write configuration file to option module feedback.

Note: Refer to SigmaWin+ Operation manual for information on how to write parameters using SigmaWin+.

Notes:

- Code H□□□ for 8 bit interpolation, Code J□□□ for 12 bit interpolation.
- Refer to the catalog for detailed specifications of the Serial Converter Unit.
- Contact your YASKAWA representative for information on the water cooling specifications of the SGLFW2.
- Hall sensor can be optionally disabled by a Servopack parameter.

## Serial Converter Unit without Polarity Sensor Cable (for Linear Encoder with Heidenhain Corporation connector)

### ◆ Model: JZDP-□003-□□□

Unit: mm

| Pin  | Signal          |
|------|-----------------|
| 1    | + 5 V           |
| 2    | Phase-S output  |
| 3    | Not used        |
| 4    | Not used        |
| 5    | 0 V             |
| 6    | /Phase-S output |
| 7    | Not used        |
| 8    | Not used        |
| 9    | Not used        |
| Case | Shield          |

**CN1**  
SERVOPACK-end  
serial data outputs

17-Series Connector:  
17LE-13090-27-FA  
from DDK Ltd.  
(Socket)

| Pin  | Signal          |
|------|-----------------|
| 1    | cos input (A+)  |
| 2    | 0 V             |
| 3    | sin input (B+)  |
| 4    | + 5 V           |
| 5    | Not used        |
| 6    | Not used        |
| 7    | /Ref input (R-) |
| 8    | Not used        |
| 9    | /cos input (A-) |
| 10   | 0 V sensor      |
| 11   | /sin input (B-) |
| 12   | 5 V sensor      |
| 13   | Not used        |
| 14   | Ref input (R+)  |
| 15   | Not used        |
| Case | Shield          |

| 13   | 0 Vs               |
| 14   | Not used           |
| 15   | Inner shield (0 V) |
| Case | Shield             |

**CN2**  
Linear Encoder-end  
analog signal inputs

Note:

1. Do not connect the unused pins.
2. Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc. However, the BID and DIR signals are not connected.
3. Use the Linear Encoder connector to change the origin position specifications of the Linear Encoder.

# Serial Converter Units

## Serial Converter Unit with Polarity Sensor Cable (for Linear Encoder with Heidenhain Corporation connector)

◆ Model: JZDP-□□06-□□□

| Pin  | Signal          |
|------|-----------------|
| 1    | + 5 V           |
| 2    | Phase-S output  |
| 3    | Not used        |
| 4    | Not used        |
| 5    | 0 V             |
| 6    | /Phase-S output |
| 7    | Not used        |
| 8    | Not used        |
| 9    | Not used        |
| Case | Shield          |

| Pin | Signal          | Pin  | Signal          |
|-----|-----------------|------|-----------------|
| 1   | cos input (A+)  | 9    | /cos input (A-) |
| 2   | 0 V             | 10   | 0 V sensor      |
| 3   | sin input (B+)  | 11   | /sin input (B-) |
| 4   | + 5 V           | 12   | 5 V sensor      |
| 5   | Not used        | 13   | Not used        |
| 6   | Not used        | 14   | Ref input (R+)  |
| 7   | /Ref input (R-) | 15   | Not used        |
| 8   | Not used        | Case | Shield          |

| Pin  | Signal                  |
|------|-------------------------|
| 1    | +5 V                    |
| 2    | Phase-U input           |
| 3    | Phase-V input           |
| 4    | Phase-W input           |
| 5    | 0 V                     |
| 6    | Not used                |
| 7    | Not used                |
| 8    | Not used                |
| 9    | Thermal protector input |
| Case | Shield                  |

Note:

- Do not connect the unused pins.
- Contact Heidenhain Corporation for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Heidenhain Corporation.
- The phase U, V, and W inputs are internally pulled up with 10 kΩ.

## Serial Converter Unit with Polarity Sensor Cable (for Linear Encoder with Renishaw PLC connector)

◆ Model: JZDP-□008-□□□

| Pin  | Signal          |
|------|-----------------|

| 2 x 0.75                  | -                                      | 2R6D   |        |                         |                         |                    |                |                  |
| 2 x 1.5                   | -                                      | 5R4D   |        |                         |                         |                    |                |                  |

| Device              | Enquires  |
|---------------------|---|
| Noise Filters       | EPA GmbH  |
| Surge Absorbers     | Yaskawa Controls Co., Ltd.                      |
| DC Reactors         |   |
| Magnetic Contactors | Fuji Electric FA Components & Systems Co., Ltd. |

- \*1. Some Noise Filters have large leakage currents. The grounding conditions also affect the size of the leakage current. If necessary, select an appropriate leakage detector or leakage breaker taking into account the grounding conditions and the leakage current from the Noise Filter.
- \*2. The last digit of an RoHS-compliant serial number is R. Consult with Yaskawa Controls Co., Ltd. for RoHS-compliant reactors.
- \*3. Can be installed separate or as footprint filter.

Note: 1. Consult the manufacturer for details on s.  
 2. Refer to the following section for information on Digital Operator Converter Cables.  
 3. Refer to the -7 Series AC Servo Drive Peripheral Device Selection Manual (Manual No. SIEP S80001 32) for the following information.

| EMC-Filter  | Leakage Current         | Ambient Temperature | Measurements     | Weight |
|-------------|-------------------------|---------------------|------------------|--------|
| FESS-4009A  | 0.3mA nom. (28mA max.)  | 55°C                | 366 x 80 x 50mm  | 1.3kg  |
| FESS-4015A  | 0.3mA nom. (40 mA max.) | 55°C                | 366 x 100 x 50mm | 1.6kg  |
| FESS-4022A* | 0.3mA nom. (40 mA max.) | 55°C                | 416 x 80 x 50mm  | 2.0kg  |
| FESS-4044A* | 0.3 mA nom (40 mA max.) | 55°C                | 435 x 180 x 50mm | 3.2kg  |

\* Available soon.

## Molded-case Circuit Breakers and Fuses

Use a molded-case circuit breaker and fuse to protect the power supply line. They protect the power line by shutting OFF the circuit when overcurrent is detected. Select these devices based on the information in the following tables.

Notes:

To comply with the Low Voltage Directive, always connect a fuse to the input side to protect against short-circuit accidents. Select fuses or molded-case circuit breakers that are compliant with UL standards. The following tables provide the net values of the current capacity and inrush current.

- Select a fuse and a molded-case circuit breaker that meet the following conditions.
- Main circuit and control circuit: No breaking at three times the current value given in the table for 5 s.
- Inrush current: No breaking at the current value given in the table for 20ms.

| Main Circuit Power Supply | Maximum Applicable Motor Capacity [kW] | Model  |        | Power Supply Capacity per SERVOPACK [kVA] | Current Capacity |                          | Inrush Current      |                             |

|  | DB Resistor connector for external DB (CN115) | JUSP-7CN115*  |  |
|  | Brake power connector (CN117)                 | JUSP-7CN117*  |  |
|  | I/O connector (CN1)                           | JUSP-7CN001   |  |
| Enclosed Safety Jumper Connector (CN8) | JZSP-CVH05-E*                                 |  |  |

\* Connectors are included by ordering YASKAWA SERVOPACKS. The other connectors can be ordered separately if necessary.

## SERVOPACK Main Circuit Wires

This section describes the main circuit wires for SERVOPACKs.

Important

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.14.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

Note:

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the ambient temperature.

### Three Phase, 400 V Wires for SGD7S SERVOPACKs

| Cables                               | Terminal Symbol | SERVOPACK Model SGD7S-           |      |      |                                  |      |                                  |      |                                  |      |                                  |                                |
|--------------------------------------|-----------------|----------------------------------|------|------|----------------------------------|------|----------------------------------|------|----------------------------------|------|----------------------------------|--------------------------------|

## Surge Absorbers for Holding Brakes (Varistors) and Diodes

### Surge Absorbers for Holding Brakes (Varistors)

Select an appropriate Surge Absorber for the power supply voltage and current of the brake. Surge absorbers are not provided by YASKAWA.

| Brake Power Supply Voltage  |          | 24 VDC                       |                     |
|-----------------------------|----------|------------------------------|---------------------|
| Surge Absorber Manufacturer |          | Nippon Chemi-Con Corporation | SEMITEC Corporation |
| Brake Rated Current         | 1 A max. | TNR5V121K                    | Z5D121              |
|                             | 2 A max. | TNR7V121K                    | Z7D121              |
|                             | 4 A max. | TNR10V121K                   | Z10D121             |
|                             | 8 A max. | TNR14V121K                   | Z15D121             |

# Regenerative Resistors

## Types of Regenerative Resistors

The following regenerative resistors can be used:

- Built-in regenerative resistors: Some models of SERVOPACKs have regenerative resistors built into them.
- External regenerative resistors: These resistors are used when the internal capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power.

Use Yaskawa's SigmaSize+, an AC Servo drive capacity selection program, to determine if a regenerative resistor is required.

Note: If you use an external regenerative resistor, you must change the setting parameter Pn600.

## Built-In Regenerative Resistor

The following table gives the specifications of the built-in regenerative resistors in the SERVOPACKs and the amount of regenerative power (average values) that they can process. A built-in regenerative resistor is provided as a standard feature. Install an external regenerative resistor when the built-in regenerative resistor cannot process all the regenerative power.

| SERVOPACK Model |        | Built-In Regenerative Resistor |              |                                  |
|-----------------|--------|--------------------------------|--------------|----------------------------------|
| SGD7S-          | SGD7W- | Resistance [Ω]                 | Capacity [W] | Minimum Allowable Resistance [Ω] |
| 1R9D, 3R5D      | -      | 75                             | 70           | 75                               |
| 5R4D            | -      |                                | 140          | 43                               |
| 8R4D, 120D      | -      | 43                             | 180          | 27                               |
| 170D            | -      | 27                             | 140          | 43                               |
| -               | 2R6D   | 43                             | 140          | 43                               |
| -               | 5R4D   |                                |              |                                  |

## External Regenerative Resistor

| SERVOPACK Specification |   | Resistor Specification |                |           |              |
|-------------------------|---|------------------------|----------------|-----------|--------------|
| SERVOPACK               | Minimum Allowable External Resistance [Ω] | Model Resistor         | Resistance [Ω] | Power [W] | Manufacturer |
| SGD7S-                  | 1R9D                                      | RH-0520W120-UL-T       | 120            | 520       | Heine        |
|                         | 3R5D                                      |                        |                |           |              |
|                         | 5R4D                                      |                        |                |           |              |
|                         | 8R4D                                      | RH-0400W045-UL-T       | 45             | 400       |              |
|                         | 120D                                      |                        |                |           |              |
|                         | 170D                                      | RH-0400W032-UL-T       | 32             |           |              |

Note:  
Contact your YASKAWA representative for information on Sigma-7 400V Dynamic Brake Resistors.

Calculate the energy that must be consumed by the resistance for one dynamic brake stop. To simplify the energy consumption calculation, assume that all the kinetic energy until the Servomotor stops is consumed by the dynamic brake resistor and use the following formula. Out of all possible operation patterns, use the one which maximizes the kinetic energy of the Servomotor.

### Rotary Servomotors

Energy consumption of the dynamic brake resistor:  $E_{DB}$  [J]

Motor moment of inertia\*:  $J_M$  [kgm<sup>2</sup>]

Load inertia:  $J_L$  [kgm<sup>2</sup>]

Motor speed just before stopping with the dynamic brake:  $N$  [min<sup>-1</sup>]

\* For detailed information on the motor moment of inertia, refer to the catalog or Servomotor product manual.

$$E_{DB} = \frac{1}{2} \times (J_M + J_L) \times \left( \frac{2\pi}{60} \times N \right)^2$$

### Linear Servomotors

Energy consumption of the dynamic brake resistor:  $E_{DB}$  [J]

Moving Coil mass\*:  $m_M$  [kg]

Load mass:  $m_L$  [kg]

Motor speed just before stopping with the dynamic brake:  $v$  [m/s]

\* For detailed information on Moving Coil mass, refer to the catalog or Servomotor product manual.

$$E_{DB} = \frac{1}{2} \times (m_M + m_L) \times v^2$$

# Batteries for Servomotors with Absolute Encoders

If you use an absolute encoder, you can use an Encoder Cable with a Battery Case connected to it to supply power and retain the absolute position data. You can also retain the absolute position data by supplying power from a battery on the host controller. The Battery Case is sold as a replacement part for the Battery Case that is included with an Absolute Encoder Cable.

| Name                     | Order Number | Remarks  |
|--------------------------|--------------|--|
| Battery case (case only) | JUSP-BA01-E  | The Encoder Cable and Battery are not included. (This is a replacement part for a damaged Battery Case.) |
| Lithium Battery          | JZSP-BA01    | This is a special battery that mounts into the Battery Case.   |

**Important**

1. You cannot attach the Battery Case to an Incremental Encoder Cable.
2. Install the Battery Case where the ambient temperature is between -5°C and 60°C.

## • Mounting a Battery in the Battery Case

Obtain a Lithium Battery (JZSP-BA01) and mount it in the Battery Case.

## • Connecting a Battery to the Host Controller

Use a battery that meets the specifications of the host controller. Use an ER6VC3N Battery (3.6 V, 2,000 mAh) from Toshiba Battery Co., Ltd. or an equivalent battery.

## Software

### SigmaSize+: AC Servo Capacity Selection Program

You can use the SigmaSize+ to select Servomotors and SERVOPACKs. There are two versions of the software: A Web-based version and a stand-alone version. The software supports all standard servo products sold by Yaskawa.

- **Features**

- Provides a vast amount of new product information.
- Lets you select servo products with a wizard.
- As long as you have a connection to the Internet, you can access and use the software anytime, anywhere. (Communications are encrypted for security)
- You can access and reuse previously entered data.

- **Examples of the Servo Selection Interface**

| CPU  | Pentium 200 MHz min.   |
| Memory   | 64 MB min. (96 MB or greater recommended)  |
| Available Hard Disk Space                        | 20 MB min.   |

## SigmaWin+ Version 7: AC Servo Drive Engineering Tool

The SigmaWin+ Engineering Tool is used to set up and optimally tune Yaskawa Sigma-series Servo Drives.

### • Features

- Set parameters with a wizard.
- Display SERVOPACK data on a computer just like you would on an oscilloscope.
- Estimate moments of inertia and measure vibration frequencies.
- Display alarms and alarm diagnostics.

# Capacity Selection for Servomotors

## Selecting the Servomotor Capacity

Use Yaskawa's SigmaSize+, an AC servo drive capacity selection program, to select Servomotor capacity. With the SigmaSize+, you can find the optimum Servomotor capacity by simply selecting and entering information according to instructions from a wizard.

If you select a Servomotor capacity with a formula, refer to the following selection examples.

### Capacity Selection Example for a Rotary Servomotor: For Speed Control

#### 1. Mechanical Specifications

| Item                                    | Code     | Value                             |
|---|----------|-----------------------------------|
| Load Speed                              | $v_L$    | 15 m/min                          |
| Linear Motion Section Mass              | $m$      | 250 kg                            |

| External Force on Linear Motion Section | $F$      | 0 N                               |

| Item                                | Code   | Value   |
|-------------------------------------|--------|---|
| Gear and Coupling Moment of Inertia | $J_G$  | $0.40 \times 10^{-4} \text{ kg}\cdot\text{m}^2$ |
| Number of Feeding Operations        | $n$    | 40 rotations/min                                |
| Feeding Distance                    | $\ell$ | 0.275 m   |
| Feeding Time                        | $tm$   | 1.2 s max.                                      |
| Friction Coefficient                | $\mu$  | 0.2   |
| Mechanical Efficiency               | $\eta$ | 0.9 (90%)                                       |

#### 2. Speed Diagram

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

$$\text{If } t_a = t_d,$$

$$t_a = t_m - \frac{60 \ell}{v_L} = 1.2 - \frac{60 \times 0.275}{15} = 1.2 - 1.1 = 0.1 \text{ (s)}$$

$$t_c = 1.2 - 0.1 \times 2 = 1.0 \text{ (s)}$$

#### 3. Motor Speed

$$\text{Load shaft speed } n_L = \frac{v_L}{P_B} = \frac{15}{0.01} = 1,500 \text{ (min}^{-1}\text{)}$$

$$\text{Motor shaft speed } n_M = n_L \cdot R = 1,500 \times 2 = 3,000 \text{ (min}^{-1}\text{)}$$

#### 4. Load Torque

$$T_L = \frac{(9.8 \cdot \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 250 + 0) \times 0.01}{2\pi \times 2 \times 0.9} = 0.43 \text{ (N}\cdot\text{m)}$$

## 5. Load Moment of Inertia

Linear motion section

$$J_{L1} = m \left( \frac{P_B}{2\pi R} \right)^2 = 250 \times \left( \frac{0.01}{2\pi \times 2} \right)^2 = 1.58 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

Ball screw

$$J_B = \frac{\pi}{32} \rho \cdot \ell_B \cdot d_B^4 \cdot \frac{1}{R^2} = \frac{\pi}{32} \times 7.87 \times 10^3 \times 1.0 \times (0.02)^4 \cdot \frac{1}{2^2} = 0.31 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

Coupling  $J_G = 0.40 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + J_G = (1.58 + 0.31 + 0.40) \times 10^{-4} = 2.29 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

## 6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.43}{60} = 135 \text{ (W)}$$

## 7. Load Acceleration Power

$$P_a = \left( \frac{2\pi}{60} n_M \right)^2 \frac{J_L}{t_a} = \left( \frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{2.29 \times 10^{-4}}{0.1} = 226 \text{ (W)}$$

## 8. Servomotor Provisional Selection

### ① Selection Conditions

$T_L \leq$  Motor rated torque

$\frac{(P_O + P_a)}{2} <$  Provisionally selected Servomotor rated output  $< (P_O + P_a)$

$n_M \leq$  Rated motor speed

$J_L \leq$  Allowable load moment of inertia

The following Servomotor meets the selection conditions.

SGM7J-02A Servomotor

### ② Specifications of the Provisionally Selected Servomotor

| Item                             | Value   |
|----------------------------------|---|
| Rated Output                     | 200 (W)   |
| Rated Motor Speed                | 3,000 (min <sup>-1</sup> )  |
| Rated Torque                     | 0.637 (N·m)   |
| Instantaneous Maximum Torque     | 2.23 (N·m)  |
| Motor Moment of Inertia          | $0.263 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$                                 |
| Allowable Load Moment of Inertia | $0.263 \times 10^{-4} \times 15 = 3.94 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$ |

## 9. Verification of the Provisionally Selected Servomotor

Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60 t_a} + T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} + 0.43$$

$\approx 1.23 \text{ (N}\cdot\text{m)} <$  Maximum instantaneous torque...Satisfactory

Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60 t_d} - T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} - 0.43$$

$\approx 0.37 \text{ (N}\cdot\text{m)} <$  Maximum instantaneous torque...Satisfactory

Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + T_S^2 \cdot td}{t}} = \sqrt{\frac{(1.23)^2 \times 0.1 + (0.43)^2 \times 1.0 + (0.37)^2 \times 0.1}{1.5}}$$

$$\approx 0.483 \text{ (N}\cdot\text{m)} < \text{Rated torque...Satisfactory}$$

## 10. Result

It has been verified that the provisionally selected Servomotor is applicable. The torque diagram is shown below.

## Capacity Selection Example for a Rotary Servomotor: For Position Control

### 1. Mechanical Specifications

| Item                                    | Code   | Value                             |
|---|--------|-----------------------------------|
| Load Speed                              | $v_L$  | 15 m/min                          |
| Linear Motion Section Mass              | $m$    | 80 kg                             |
| Ball Screw Length                       | $l_B$  | 0.8 m                             |
| Ball Screw Diameter                     | $d_B$  | 0.016 m                           |
| Ball Screw Lead                         | $P_B$  | 0.005 m                           |
| Ball Screw Material Density             | $\rho$ | $7.87 \times 10^3 \text{ kg/m}^3$ |
| External Force on Linear Motion Section | $F$    | 0 N                               |
| Coupling Mass                           | $m_C$  | 0.3 kg                            |

| Item                          | Code     | Value                 |
|-------------------------------|----------|-----------------------|
| Coupling Outer Diameter       | $d_C$    | 0.03 m                |
| Number of Feeding Operations  | $n$      | 40 rotation/min       |
| Feeding Distance              | $l$      | 0.25 m                |
| Feeding Time                  | $tm$     | 1.2 s max.            |
| Electrical Stopping Precision | $\delta$ | $\pm 0.01 \text{ mm}$ |
| Friction Coefficient          | $\mu$    | 0.2                   |
| Mechanical Efficiency         | $\eta$   | 0.9 (90%)             |

### 2. Speed Diagram

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If  $t_a = t_d$  and  $t_s = 0.1$  (s),

$$t_a = tm - t_s - \frac{60 \ell}{v_L} = 1.2 - 0.1 - \frac{60 \times 0.25}{15} = 0.1 \text{ (s)}$$

$$t_c = 1.2 - 0.1 - 0.1 \times 2 = 0.9 \text{ (s)}$$

# Capacity Selection for Servomotors

## 3. Motor Speed

Load shaft speed

$$n_L = \frac{v_L}{P_B} = \frac{15}{0.005} = 3,000 \text{ (min}^{-1}\text{)}$$

Motor shaft speed

Direct coupling gear ratio  $1/R = 1/1$

Therefore,  $n_M = n_L \cdot R = 3,000 \times 1 = 3,000 \text{ (min}^{-1}\text{)}$

## 4. Load Torque

$$T_L = \frac{(9.8 \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 80 + 0) \times 0.005}{2\pi \times 1 \times 0.9} = 0.139 \text{ (N}\cdot\text{m)}$$

## 5. Load Moment of Inertia

Linear motion section

$$J_{L1} = m \left( \frac{P_B}{2\pi R} \right)^2 = 80 \times \left( \frac{0.005}{2\pi \times 1} \right)^2 = 0.507 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

Ball screw  $J_B = \frac{\pi}{32} \rho \cdot l_B \cdot d_B^4 = \frac{\pi}{32} \times 7.87 \times 10^3 \times 0.8 \times (0.016)^4 = 0.405 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

Coupling  $J_C = \frac{1}{8} m_C \cdot d_C^2 = \frac{1}{8} \times 0.3 \times (0.03)^2 = 0.338 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + J_C = 1.25 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

## 6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.139}{60} = 43.7 \text{ (W)}$$

## 7. Load Acceleration Power

$$P_a = \left( \frac{2\pi}{60} n_M \right)^2 \frac{J_L}{t_a} = \left( \frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{1.25 \times 10^{-4}}{0.1} = 123.4 \text{ (W)}$$

## 8. Servomotor Provisional Selection

### ① Selection Conditions

$T_L \leq$  Motor rated torque

$\frac{(P_O + P_a)}{2} <$  Provisionally selected Servomotor rated output  $< (P_O + P_a)$

$n_M \leq$  Rated motor speed

$J_L \leq$  Allowable load moment of inertia

The following Servomotor meets the selection conditions.

SGM7J-01A Servomotor

### ② Specifications of the Provisionally Selected Servomotor

| Item                             | Value   |
|----------------------------------|---|
| Rated Output                     | 200 (W)   |
| Rated Motor Speed                | 3,000 (min <sup>-1</sup> )  |
| Rated Torque                     | 0.318 (N·m)   |
| Instantaneous Maximum Torque     | 1.11 (N·m)  |
| Motor Moment of Inertia          | 0.0659 × 10 <sup>-4</sup> (kg·m <sup>2</sup> )                                |
| Allowable Load Moment of Inertia | 0.0659 × 10 <sup>-4</sup> × 35 = 2.31 × 10 <sup>-4</sup> (kg·m <sup>2</sup> ) |
| Encoder Resolution               | 24 bits (16,777,216 pulses/rev)   |

### 9. Verification of the Provisionally Selected Servomotor

Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} + 0.139$$

$$\approx 0.552 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} - 0.139$$

$$\approx 0.274 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + T_S^2 \cdot td}{t}} = \sqrt{\frac{(0.552)^2 \times 0.1 + (0.139)^2 \times 0.9 + (0.274)^2 \times 0.1}{1.5}}$$

$$\approx 0.192 \text{ (N}\cdot\text{m)} < \text{Rated torque...Satisfactory}$$

It has been verified that the provisionally selected Servomotor is applicable in terms of capacity. Position control is considered next.

### 10. Position Detection Resolution

Position detection unit:  $\Delta^\ell = 0.01 \text{ mm/pulse}$

The number of pulses per motor rotation must be less than the encoder resolution (pulses/rev).

$$\text{The number of pulses per revolution (pulses)} = \frac{P_B}{\Delta^\ell} = \frac{5 \text{ mm}}{0.01 \text{ mm}} = 500 < \text{Encoder resolution [16777216 (pulses/rev)]}$$

### 11. Reference Pulse Frequency

$$v_s = \frac{1,000 \text{ }^\circ\text{L}}{60 \times \Delta^\ell} = \frac{1,000 \times 15}{60 \times 0.01} = 25,000 \text{ (pps)}$$

Confirm that the maximum input pulse frequency is greater than the reference pulse frequency.

Refer to the specifications in the SERVOPACK manual for the maximum input pulse frequency.

It has been verified that the provisionally selected Servomotor is applicable for position control.

# Capacity Selection for Servomotors

## 8. Result

It has been verified that the provisionally selected Servomotor is applicable. The torque diagram is shown below.

## Servomotor Capacity Selection Example for Linear Servomotors

### 1. Mechanical Specifications

| Item                 | Code  | Value  | Item                                    | Code  | Value  |
|----------------------|-------|--------|---|-------|--------|
| Load Mass            | $m_W$ | 1 kg   | Acceleration Time                       | $t_a$ | 0.02 s |
| Table Mass           | $m_T$ | 2 kg   | Constant-speed Time                     | $t_c$ | 0.36 s |
| Motor Speed          | $v$   | 2 m/s  | Deceleration Time                       | $t_d$ | 0.02 s |
| Feeding Distance     | $l$   | 0.76 m | Cycle Time                              | $t$   | 0.5 s  |
| Friction Coefficient | $\mu$ | 0.2    | External Force on Linear Motion Section | $F$   | 0 N    |

### 2. Operation Pattern

### 3. Steady-State Force (Excluding Servomotor Moving Coil)

$$F_L = \{9.8 \times \mu \times (m_W + m_T)\} + F = 9.8 \times 0.2 \times (1 + 2) + 0 = 5.88 \text{ (N)}$$

### 4. Acceleration Force (Excluding Servomotor Moving Coil)

$$F_P = (m_W + m_T) \times \frac{v}{t_a} + F_L = (1 + 2) \times \frac{2}{0.02} + 5.88 = 305.88 \text{ (N)}$$

### 5. Provisional Selection of Linear Servomotor

#### ① Selection Conditions

$$F_P \leq \text{Maximum force} \times 0.9$$

$$F_S \leq \text{Maximum force} \times 0.9$$

$$F_{rms} \leq \text{Rated force} \times 0.9$$

## ② Specifications of the Provisionally Selected Servomotor

| Item   | Value     |
|--|-----------|
| Maximum Force                                | 440 (N)   |
| Rated Force                                  | 147 (N)   |
| Moving Coil Mass ( $m_M$ )                   | 0.82 (kg) |
| Servomotor Magnetic Attraction ( $F_{att}$ ) | 0 (N)     |

### 6. Verification of the Provisionally Selected Servomotor

Steady-State Force

$$F_L = \mu \{9.8 \times (m_W + m_T + m_M) + F_{att}\} = 0.2 \{9.8 \times (1 + 2 + 0.82) + 0\} = 7.5 \text{ (N)}$$

Verification of Acceleration Force

$$F_P = (m_W + m_T + m_M) \times \frac{v}{t_a} + F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} + 7.5$$

$$= 389.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

Verification of Deceleration Force

$$F_S = (m_W + m_T + m_M) \times \frac{v}{t_d} - F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} - 7.5$$

$$= 374.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

Verification of Effective Force

$$F_{rms} = \sqrt{\frac{F_P^2 \cdot t_a + F_L^2 \cdot t_c + F_S^2 \cdot t_d}{t}} = \sqrt{\frac{389.5^2 \times 0.02 + 7.5^2 \times 0.36 + 374.5^2 \times 0.02}{0.5}}$$

$$= 108.3 \text{ (N)} \leq \text{Rated force} \times 0.9 (= 132.3 \text{ N}) \dots \text{Satisfactory}$$

### 7. Result

It has been verified that the provisionally selected Servomotor is applicable.

# Capacity Selection for Regenerative Resistors

## Calculating the Regenerative Energy

This section shows how to calculate the regenerative resistor capacity for the acceleration/deceleration operation shown in the following figure.

### Calculation Procedure for Regenerative Resistor Capacity

| Step | Item  | Code  | Formula  |
|------|---|-------|--|
| 1    | Calculate the rotational energy of the Servomotor.                        | $E_S$ | $E_S = Jn_M^2/182$   |
| 2    | Calculate the energy consumed by load loss during the deceleration period | $E_L$ | $E_L = (\pi/60) n_M T_L t_D$<br>Note: If the load loss is unknown, calculate the value with $E_L$ set to 0.  |
| 3    | Calculate the energy lost from Servomotor winding resistance.             | $E_M$ | (Value calculated from the graphs in <b>◆ Servomotor Winding Resistance Loss</b> )<br>$\times t_D$   |
| 4    | Calculate the energy that can be absorbed by the SERVOPACK.               | $E_C$ | Calculate from the graphs in <b>◆ SERVOPACK-absorbable Energy</b>  |
| 5    | Calculate the energy consumed by the regenerative resistor.               | $E_K$ | $E_K = E_S - (E_L + E_M + E_C)$<br>$E_K = E_S - (E_L + E_M + E_C) + E_G$<br>Note: Use this formula if there will be continuous periods of regenerative operation, such as for a vertical axis. |
| 6    | Calculate the required regenerative resistor capacity (W).                | $W_K$ | $W_K = E_K/(0.2 \times T)$   |

$E_G$  (joules): Energy for continuous period of regenerative operation

$$E_G = (2\pi/60) n_{MG} T_G t_G$$

$T_G$ : Servomotor's generated torque in continuous period of regenerative operation (N m)

$n_{MG}$ : Servomotor's motor speed for same operation period as above ( $\text{min}^{-1}$ )

$t_G$ : Same operation period as above (s)

Note: 1. The 0.2 in the equation for calculating  $W_K$  is the value when the regenerative resistor's utilized load ratio is 20%.

2. The units for the various symbols are given in the following table.

| Code           | Description                                  | Code  | Description                           |
|----------------|--|-------|---------------------------------------|
| $E_S$ to $E_K$ | Energy in joules (J)                         | $T_L$ | Load torque (N m)                     |
| $W_K$          | Required regenerative resistor capacity (W)  | $t_D$ | Deceleration stopping time (s)        |
| $J$            | $= J_M + J_L$ ( $\text{kg}\cdot\text{m}^2$ ) | T     | Servomotor repeat operation cycle (s) |
| $n_M$          | Servomotor motor speed ( $\text{min}^{-1}$ ) |       |                                       |

If the value of  $W_K$  does not exceed the capacity of the built-in regenerative resistor of the SERVOPACK, an External Regenerative Resistor is not required. For details on the built-in regenerative resistors, refer to the SERVOPACK specifications. If the value of  $W_K$  exceeds the capacity of the built-in regenerative resistor, install an External Regenerative Resistor with a capacity equal to the value for  $W$  calculated above.

## SERVOPACK-absorbable Energy

The following figures show the relationship between the SERVOPACK's input power supply voltage and its absorbable energy.

### Sigma-7S SERVOPACKS

### Sigma-7W SERVOPACKS

## Servomotor Winding Resistance Loss

The following figures show the relationship for each Servomotor between the Servomotor's generated torque and the winding resistance loss.

\*1. Use this model number to purchase the Option Module separately.

\*2. The model numbers of the Magnetic Ways of Linear Servomotors are given in parentheses.

# Warranty

## Details of Warranty

### Warranty Period

The warranty period for a product that was purchased (hereinafter called the “delivered product”) is one year from the time of delivery to the location specified by the customer or 18 months from the time of shipment from the Yaskawa factory, whichever is sooner.

### Warranty Scope

YASKAWA shall replace or repair a defective product free of charge if a defect attributable to YASKAWA occurs during the above warranty period. This warranty does not cover defects caused by the delivered product reaching the end of its service life and replacement of parts that require replacement or that have a limited service life.

This warranty does not cover failures that result from any of the following causes.

- Improper handling, abuse, or use in unsuitable conditions or in environments not described in product catalogs or manuals, or in any separately agreed-upon specifications
- Causes not attributable to the delivered product itself
- Modifications or repairs not performed by YASKAWA
- Use of the delivered product in a manner in which it was not originally intended
- Causes that were not foreseeable with the scientific and technological understanding at the time of shipment from YASKAWA
- Events for which YASKAWA is not responsible, such as natural or human-made disasters

### Limitations of Liability

- YASKAWA shall in no event be responsible for any damage or loss of opportunity to the customer that arises due to failure of the delivered product.
- YASKAWA shall not be responsible for any programs (including parameter settings) or the results of program execution of the programs provided by the user or by a third party for use with programmable Yaskawa products.
- The information described in product catalogs or manuals is provided for the purpose of the customer purchasing the appropriate product for the intended application. The use thereof does not guarantee that there are no infringements of intellectual property rights or other proprietary rights of Yaskawa or third parties, nor does it construe a license.
- YASKAWA shall not be responsible for any damage arising from infringements of intellectual property rights or other proprietary rights of third parties as a result of using the information described in catalogs or manuals.

### Suitability for Use

- It is the customer’s responsibility to confirm conformity with any standards, codes, or regulations that apply if the YASKAWA product is used in combination with any other products.
- The customer must confirm that the YASKAWA product is suitable for the systems, machines, and equipment used by the customer.
- Consult with YASKAWA to determine whether use in the following applications is acceptable. If use in the application is acceptable, use the product with extra allowance in ratings and specifications, and provide safety measures to minimize hazards in the event of failure.
  - » Outdoor use, use involving potential chemical contamination or electrical interference, or use in conditions or environments not described in product catalogs or manuals
  - » Nuclear energy control systems, combustion systems, railroad systems, aviation systems, vehicle systems, medical equipment, amusement machines, and installations subject to separate industry or government regulations
  - » Systems, machines, and equipment that may present a risk to life or property
  - » Systems that require a high degree of reliability, such as systems that supply gas, water, or electricity, or systems that operate continuously 24 hours a day
  - » Other systems that require a similar high degree of safety
- Never use the product for an application involving serious risk to life or property without first ensuring that the system is designed to secure the required level of safety with risk warnings and redundancy, and that the YASKAWA product is properly rated and installed
- The circuit examples and other application examples described in product catalogs and manuals are for reference. Check the functionality and safety of the actual devices and equipment to be used before using the product
- Read and understand all use prohibitions and precautions, and operate the Yaskawa product correctly to prevent accidental harm to third parties

### Specifications Change

The names, specifications, appearance, and accessories of products in product catalogs and manuals may be changed at any time based on improvements and other reasons. The next editions of the revised catalogs or manuals will be published with updated code numbers. Consult with your YASKAWA representative to confirm the actual specifications before purchasing a product.
